DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1, 2, 4, 5, 7-13, 15, 16, 18-20 rejected under 35 U.S.C. 102(b) as being anticipated by **Klein 3,809,936**

Klein 3'936 discloses an electrical generator comprising; a stator core having slots, a rotor (Fig.1 , column 3 line 4) , a housing (10) , a sets of winding (15,16,17,18,19, 20,21) disposed within slots, said winding having $2N+1$ phases where N is an integer greater than 1, the sets of winding is coupled to a common node (Fig. 6), a switching circuit coupled to the windings, the switching circuit comprising at least $2(N+1)$ switching elements (Fig. 6,) a full wave rectifier (Fig. 6), wherein $N = 3$, and the winding has a full pitch (Fig. 3), and a fractional pitch (Fig. 9).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3,6,14,17 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Klein 3,809,936** in view of **Auinger 5,783,891**.

Klein'936 teaches every aspect of the invention except a sets of winding coupled polygonally and having five phases (integer $N = 2$).

Auinger ,891 discloses an electrical generator comprising, a set of winding having $2N+1$ phases ,where $N = 2$ (five phases column 4, line 50) ,wherein the winding are coupled polygonally (Fig. 1D ,column 2 line 30).

Therefore it would have been obvious to one having skill in the art at the time the invention was made to combine **Klein 3,809,936** electric generator with five phase polygonally connected winding taught by **Auinger ,891** to utilize the harmonic wave components effectively.
